

I'm a retired M.D. pediatric hematologist/oncologist and realized anti-vaxxer. Here's why:

Vaccines do not provide durable protection. Nature measles, chickenpox and mumps do.

Immunosuppressed children and adults are best protected around healthy unvaccinated others.

Vaccines destroy the immune system and contain extremely toxic contaminants.

As the world outside the U.S. knows, vaccines are strongly causative for developmental disorders, autism, cancer, food allergies, neurodegenerative diseases and autoimmune diseases.

Please vote NO to both bills above.

Thank you.

Sue McIntosh, M.D.
